

Jericho De Leon Bermas

Full Stack Engineer

✉ jecho.deleon@gmail.com

☎ +63 917 113 5133

🏠 Laguna, Philippines

Full Stack & Automations Engineer with 3 years of experience building web and mobile applications. Expert in integrating AI-driven workflows and CI/CD pipelines to optimize business operations. Proven track record of reducing manual workloads by up to 70% through custom automation and cloud infrastructure management

Professional Highlights

- **Full-Stack Development:** Extensive experience in Next.js, React, Node.js, and Laravel for web and mobile platforms
- **AI & Automations:** Specialized in building AI agents and low-code workflows using n8n and Zapier to automate complex document generation.
- **Monetization & Flow Logic:** Experienced in implementing business logic for trial-based systems, including 5-trial limits and automated redirects to payment gateways.
- **Proactive UI/UX Improvements:** Actively suggests and implements UI/UX enhancements to improve customer usability and mobile responsiveness across diverse projects.
- **Workflow & Process Optimization:** Proven ability to identify system inefficiencies, successfully proposing and implementing solutions that reduced build times and streamlined deployment processes.
- **Secure Content Management:** Implemented content moderation systems to protect users and developed functionalities for managing complex data like PDF exports and digital signatures.
- **Cloud Infrastructure:** Proficient in Google Cloud Platform (GCP), Docker, and implementing robust CI/CD pipelines via GitHub Actions.
- **Productivity Optimization:** Demonstrated ability to streamline development environments and reduce build times.

Experience

Full Stack and Automations Engineer - GOOSELAW Immigration Law Firm Sept 2025 - Jan 2026

- **AI Document Automation:** Engineered an n8n-driven system using OpenAI and Gemini to automate legal letters (Visa, LMIA, H&C), reducing document prep time by 70%.
- **Workflow Engineering:** Implemented complex prompt engineering and system instructions to ensure generated legal submissions adhered to strict formatting standards.
- **Infrastructure Transformation:** Established the firm's first version control system, replacing direct Cloud Run edits with a secure GitHub repository.
- **DevOps Implementation:** Developed CI/CD pipelines using GitHub Actions with automated testing and linting to ensure stable deployments to GCP Cloud Run.
- **Next.js Development:** Built a client-facing questionnaire app with Next.js and Firebase, featuring real-time validation, progress saving, and secure evidence uploads.
- **Cloud Optimization:** Refactored legacy code to reduce redundant instantiations in Cloud Run, improving application performance and resource efficiency.
- **IT Administration:** Managed technical onboarding and security for 15+ employees across Google Admin, Microsoft 365, 1Password, and Adobe suites.
- **Support & Documentation:** Acted as primary technical support and authored "how-to" guides to streamline internal troubleshooting and reduce repetitive tickets.

Full Stack Developer – Seafair Cruises LLC/Expoships LLLP (3 months) *June 2025 – September 2025*

- Contributed to the development and maintenance of a monolithic web application.
- Developed and deployed new features to production, ensuring improved performance and functionality.
- Resolved software defects and optimized performance across both front-end and back-end.
- Participated in database schema design and normalization using PostgreSQL and Supabase.
- Collaborated remotely with the Dev Team to deliver business-critical solutions.
- Actively proposed workflow improvements that reduced build times and streamlined deployment processes.

Full Stack Engineer - J Labs Innovatech Inc. (1 year and 6 months) *Jan 2024- June 2025*

- Contributed to various projects using React, React Native, NestJS and Laravel.
- Developed advanced features, enhancing functionality and user engagement.
- Ensured robust integration, performance optimization, and scalability across application.
- Projects:
 - Pieza (Web & Mobile App) – React Native + React + Laravel
 - A marketplace for vehicle parts.
 - Developed functionality to update, edit, delete, and import/export products via Excel.
 - Resqyou (Mobile & Web App) – React Native + React + Laravel
 - A modern ticketing system where violation tickets can be handled by lawyers online.
 - Developed features to add/edit names, add signatures, and export to PDF.
 - WSG Energy Services (Web App) – React + Laravel
 - Core developer, built from scratch, implementing various CRUD operations as well as complicated UI enhancements.
 - Developed additional features for their PDF canvas app where user can add tags to the drawings
 - Reforal (Web App) – React + Laravel
 - Referral System Web App for Dental Clinics & Labs
 - Focused on developing a community board for dentists and users to post and comment.
 - Implemented mobile responsiveness for the admin portal.
 - Tulu (Web App) – React + NestJS
 - Car Rental Marketplace
 - Implemented a favorites system allowing users to favorite cars.
 - Provided UI and code optimizations.
 - VuBlox (Sports Hub Web App) – React + NestJS
 - Implemented a timeline feature showing all sports-related events on a specific date.
 - Developed a content moderation system preventing under-18 users from viewing violent content.
 - Built an invite management system for events and timelines.
 - Year Glance (Calendar Management Web App) – React + Laravel
 - Implemented a new feature for toggling UIs
 - Implemented an enhancement for filtering events

Junior Full Stack Developer - Baytech BPO Corporation (1 year)

Jan 2023- Jan 2024

- Developed web applications including AI tools, PDF fill sites, and feature flag implementations.
- Worked with PHP, JavaScript, Angular, Vue, React, Next.js, Laravel, and CodeIgniter.
- Suggested UI/UX improvements to enhance user experience across multiple projects.
- Projects:
 - PDFRun (Web App) – Vue + CodeIgniter
 - A PDF fill site.
 - Implemented a functionality where users can view the PDF result in one of their PDF wizard fill sites.
 - Added an admin feature to insert additional fields in the wizard.
 - Created a navigation sidebar for improved wizard usability.
 - Implemented a payment modal after form completion.
 - Enabled feature flag activation, allowing marketing to toggle different features and configurations for customers.
 - AvatarMaker – ReactJS + Laravel + Python + Docker
 - An image generation web app where users can insert prompts to create avatars.
 - Implemented a functionality allowing 5 free trials before prompting payment.
 - ChatPDF – React + Python + Laravel + Docker
 - An AI chatbot that interacts with users based on PDF content.
 - Integrated the same free trial mechanism as AvatarMaker.
 - SignedTrue – Angular + jQuery
 - Implemented various UI enhancements to the PDF canvas.

Junior Full Stack Developer - Supafaya PTE LTD.

Oct 2022 - Jan 2023

- Implemented key features for user privileges and homepage functionalities.
- Led the transition from Create React App (CRA) to Vite for improved development workflow.
- Developed sales and logistics features within a React and Firebase framework.

Education

Mapúa Malayan Colleges Laguna - Bachelor of Science in Computer Engineering

2022

Makiling National HighSchool

2015

Publications

KALAT (Keep Area Lean And Tidy) : A Web-Based Application with Arduino System for Data-Driven Solid Waste Management Utilizing Microcontrollers for Real-Time Monitoring and Routing Optimization

- Developed a trash collection web app with Next.js as the frontend.
- Implemented Flask-Python for Google API integration (shortest path algorithm).
- Used Node.js as the standard API server for backend processing.
- Designed to optimize waste collection in Calamba City, Philippines.

Certifications

Cisco Certified Network Associate (CCNA) – Routing & Switching

Mapúa Malayan Colleges Laguna | Cisco Networking Academy – 2020

Full Stack Open

University of Helsinki – 2022

- Covered foundational topics in React, Node.js, JavaScript, and TypeScript.

LETTER OF RECOMMENDATION

September 21, 2025

To whom it may concern:

We are, Nadia A. Tiwing, Senior Full Stack Developer, and Psalma Laya A. Canoy, serving as the current Hiring Manager for Seafair Cruises LLC/Expoships LLLP. We had the pleasure of working as Mr. Jericho De Leon Bermas' direct Senior Developer and Administrator during his three-month engagement with our company as a Full-Stack Developer.

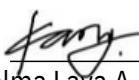

During this period, Mr. Bermas demonstrated not only strong technical proficiency in web development but also a remarkable ability to proactively improve workflows and design planning. He contributed to feature implementation, bug resolution, within our monolithic software platform, delivering work that enhanced the performance of our system.

Despite the challenges that come with joining a fast-paced environment, Jericho quickly became an integral part of the team. He identified inefficiencies within our development process and proposed actionable solutions, helping us improve build times and streamline deployments.

Our team continues to benefit from the improvements he introduced, which have had a lasting positive impact on our operations. Our decision not to retain Mr. Bermas was in no way a reflection of his abilities or the value he could bring to our company. Rather, it was driven by our current strategic direction, which prioritizes operational sustainability over expanding our tech arm at this time. Under different circumstances, we would have been fortunate to keep him on board. We wholeheartedly recommend Mr. Bermas and believe he would be a valuable addition to any team.

We confidently recommend Jericho to any company seeking a skilled and team-oriented Full-Stack Developer. He is not only technically capable but also driven by a genuine desire to improve processes and deliver meaningful results.

LETTER OF RECOMMENDATION

December 6, 2023

Good day,

I am AJ Morales, working as the current product manager and development head for *Supafaya*'s tech arm. I had the pleasure of working as Mr. Bermas' team leader for his internship at our company for a span of three months, where he showed not just his proficiency and skill in web development but also his acuity to workplace dynamics and strive to push and create changes that brought improvements to our workflows and processes as a whole.

I am writing this letter of recommendation for Mr. Jericho Bermas in order to share these strengths.

Mr. Bermas was part of our initial batch of interns. As a startup, we *do first* and *refine later*. This, unfortunately, means that when it came to this first batch, they became the guinea pigs for our program, leading to a less-than-ideal onboarding process, curriculum, and overall plan for their tasks and how we could best utilize them. However, this had an unintended silver lining of bringing out the best in some people, Mr. Bermas being one of them. Through the slog of having to learn our codebase with little to no documentation, he was able to identify gaps and massive points of improvement that we had previously missed. In his short stay here, he led one of our biggest tech stack improvements. Without going too much into the details of this process, he was able to identify issues with our current stack that led to ridiculously long build times and a very unpleasant developer experience. Within his first month, he was already able to pitch a plan of execution to revamp and refactor our codebase, which was fully implemented by the time his internship period had ended.

Our team continues to benefit from these improvements to this day.

Our decision not to absorb Mr. Bermas was not, at all, a reflection of his capabilities, skills, or an ignorance of what he would bring to this company moving forward. Simply put, the direction the company is going in limits the expansion of our tech arm in favor of creating more sustainable changes in our operations. I can confidently say that if the circumstances were different, we would be lucky to have him. I am writing this letter of recommendation as I believe that accepting Mr. Bermas on your team would be to your benefit.

His skills as a developer are more than present; they are exceptional. But above all, I've always treasured people who work well with a team. Whose tasks and responsibilities are propelled by a drive to improve what's there, find what could be better, and do what's best for the company and its vision. And in his short stay with us, he has shown me that.

Sincerely,

Anthony John Morales
Product Manager
